EDUCATION

Georgia Institute of Technology

Atlanta, GA

Bachelor of Science in Computer Science, Minor in Financial Technology

Aug. 2023 – May 2027

Concentrations: Artificial Intelligence, Human-Computer Interaction

GPA: 3.86/4.0

Relevant Coursework: Data Structures, Algorithms, Intro to AI, ML, Statistics, UX Design, Finance & Investments, Engineering Economics

TECHNICAL SKILLS

Certifications: AWS Certified Solutions Architect-Associate, AWS Certified AI Practitioner

Languages: Python, SQL, Java, JavaScript, TypeScript, C, HTML, CSS, Solidity

Frameworks & Libraries: React.js, Node.js, Agile, Apache Airflow, Pandas, NumPy, Scikit-learn, PyTorch, Spark

Tools: AWS, Git, Grafana, Docker, Microsoft Office (Excel), Jira, Confluence, Android Studio, Adobe Creative Suite

EXPERIENCE

Amazon.com, Inc.

Bellevue, WA

Supply Chain Manager Intern, Product/Engineering

May 2026 – Aug. 2026

- Built and launched a production AI application tracking 300+ aircraft engines (\$1.8B+ in assets) across 12+ global partners, cutting status lookup from ~30 minutes to <15 seconds through LLM-based update triage and centralized real-time visibility (React, AWS)
- Negotiated directly with 7 vendors, defining 3 scalable status mechanisms preventing lost engine visibility costs of up to \$3M/month
- Built ETL pipeline transforming 60+ unstructured MRO updates (email, spreadsheet, portals) into 23 fields at 98% extraction accuracy
- Led product discovery, authored PRD, implemented algorithmic at-risk alerts eliminating 1,500+ hours/year of manual tracking

Amazon Web Services, Inc.

Seattle, WA

Cloud Consultant Intern, AI/ML

May 2025 – Aug. 2025

- Led 0-1 product discovery for agentic AI certification tool, translating 50+ user pain points into PRD, workflows, and success metrics
- Built AWS certification application using microlearning principles and adaptive quizzes, cutting prep from ~1 month to ~10 hours
- Deployed custom architecture on AWS, using React.js, Lambda, Bedrock (w/ Model Context Protocol), and DynamoDB
- Championed technical pivot from RAG to MCP, autonomously querying 100,000+ AWS docs, cutting hallucinations ~85% over RAG

Volvo Group

Greensboro, NC

Data Scientist Intern

Jan. 2025 – May 2025

- Co-invented a patent-pending tuning method for automated driver assist systems, achieving ~15% improvement in performance
- Established 6 Python ETL pipelines to process 100k+ test-fleet records/day into PostgreSQL database enabling advanced analytics
- Delivered 3 Grafana dashboards that synthesized steering performance data yielding ~5% improvement in steering component
- Built decision-tree algorithm for root cause analysis of manufacturing issue, isolating \$50M defect areas in 1 week

LEADERSHIP

Georgia Institute of Technology, College of Computing

Atlanta, GA

Head Teaching Assistant – Object-Oriented Programming (CS 1331)

Jan. 2024 – Present

- Led course execution for 1,000+ students, translating pain points into improvements across instruction, assignments, and support
- Managed 21 TAs, drove day-to-day course decisions, balancing professor priorities with student needs to improve satisfaction by 15%.
- Released 75+ new course materials leading to 25% exam improvement through clear technical guidance/structured knowledge sharing
- Delivered highest ever course GPA through engaging instruction and explaining complicated subjects in a relatable manner

PROJECTS

Mobile Computer Vision for Posture Health | TensorFlow, React Native, User-Centered Design (UCD) Jan. 2026 – May 2026

- Built computer-vision app using on-device MoveNet TFLite to score posture from live video to improve desk-work posture health
- Developed scale-invariant posture scoring from trunk/neck angles, mapping posture to a real-time 0–100 score across 3 feedback states
- Designed haptic slouch alerts, movement reminders, and focus interventions to simultaneously reduce phone distraction at work
- Conducted 12 user studies achieving 100% task completion and 95% satisfaction, iterated thresholds, alerts, and UX from feedback

Real World Poker Agent with Deception Cues | Machine Learning Project, Neural Networks

Jan. 2026 – May 2026

- Built real world poker robot combining physical card recognition, facial microexpression analysis, and theoretic decision-making
- Trained and evaluated MobileNet and ResNet-18 on 8,614 card images, selecting MobileNet for 94.7% test accuracy
- Developed an LSTM deception classifier using OpenFace facial landmarks and 3-second video windows, achieving a 0.75 F1 score
- Integrated bluff probabilities into poker agent, improving win rate to 26% versus 14% for a random baseline in live human testing
